

UTFR

University of Toronto Formula Racing

Sponsorship Overview Package

We are UTFR

The University of Toronto Formula Racing Team is a university engineering design team which competes in Formula SAE, the largest collegiate engineering design competition in the world.

Every year, UTFR fully designs and builds a new small, electric — and now driverless capable — formula-style race car to compete against other universities from around the world. With changing FSAE regulations, improving technology, and bigger goals to reach for as a team, we must not only design, build, and compete a new car, but reimagine its success each year. New, complex challenges demand that we adapt and improve, especially with our switch from a combustion to electric vehicle and our entrance into the world of autonomous driving.

Over its 25 year history, the University of Toronto Formula Racing Team has established a reputation for ruthless competitiveness and unique design concepts. We are committed to our team's core values of achieving maximum performance in competitions, breaking boundaries in innovation and design, and most importantly, encouraging and fostering the development of our students.

FSAE/Formula Student

Formula SAE is the largest engineering design competition, with over 600 universities and colleges competing worldwide. Students compete to design and build the fastest car, as evaluated by dynamic tests and an endurance race. Teams are also judged on their design rationale and business acumen by industry professionals. This unique environment is a breeding ground for future talent, not only in the realm of motorsport or the automotive sector, but for all disciplines of industry.

New Developments

Electric Vehicle (EV) Development

It's no secret that electric vehicles are the future. After years of planning, designing, and reimagining our team, UTFR is very proud to be among some of the early teams to switch to a fully electric FSAE car. The successful development of our first electric vehicle has brought the team tremendous improvement in vehicle performance. In comparison to our previous projects, our new powertrain is capable of delivering over twice as much power and over seven times as much torque instantaneously at all vehicle speeds. In tackling this challenge, the team has seen a profound increase in electrical and software engineering members, strengthening the diversity of disciplines within the team and allowing us to engage in another field of engineering to professional standards.

Driverless Vehicle (DV) Development

Fully driverless FSAE vehicles are in their very early stages of development. Staying ahead of the curve and following our partners in Europe, UT23 is our first vehicle capable of fully autonomous driving, while also maintaining complete manual driving capabilities. It is not remote controlled; our vehicle has the ability to detect cones with multi-sensor fusion, pushing the limits of driverless vehicles and successfully navigate itself through a track. This has opened up a whole new world of competitions and improvements for the team to explore, bringing a new era of robotics and AI development. Our engineers gain experience in the full self-driving car stack, from computer vision and machine learning in perception to path planning and control systems.

Partner Support

Since 1998, UTFR has enjoyed great success in both Europe and North America, all thanks to the help of our supporters. We depend on their generosity and kind contributions to accomplish our goals every year. In return, we thank them with all the publicity we can offer on our car, at our public appearances, and online. We've worked with a variety of supporters to draw attention to our partnership, and we continue to work hard to make our partnerships mutually beneficial.

Why partner with UTFR?

UTFR has a long-standing history of partnering with and catering to the needs of companies and organizations of all types; from local small businesses that offer us the products & services we need in our manufacturing process, to globally recognized brands. We work closely with our partners to maximize the return on their investment in our team. With defined sponsorship levels featuring different benefits, our partners have clarity on exactly what we can provide them. As a student-run team, we are incredibly appreciative of the generous financial and in-kind support we receive from our sponsors to build our car and continue to work towards the future of electric and autonomous vehicles and the futures of our members.

Sponsorship Benefits

Instagram:

As of April 2023, our Instagram account @uoftfsae (see right) has around 2400 followers and is rapidly growing. We have a consistent posting schedule of 1-2 still-image posts and 1 Reel (short video) per week. We reach on average 10,000 accounts per month. Our Instagram Reels have received a combined total of over 47,000 views in 2022. 93% of our audience is aged 18-34.

To our sponsors, we offer high-quality Instagram posts; usually consisting of photos relevant to the sponsor's product, or of the sponsor's product in use in our manufacturing process. We are also open to tailoring ad campaigns to brands' needs, utilizing Instagram features such as Reels and Stories, as well as using other social media platforms including LinkedIn and TikTok.

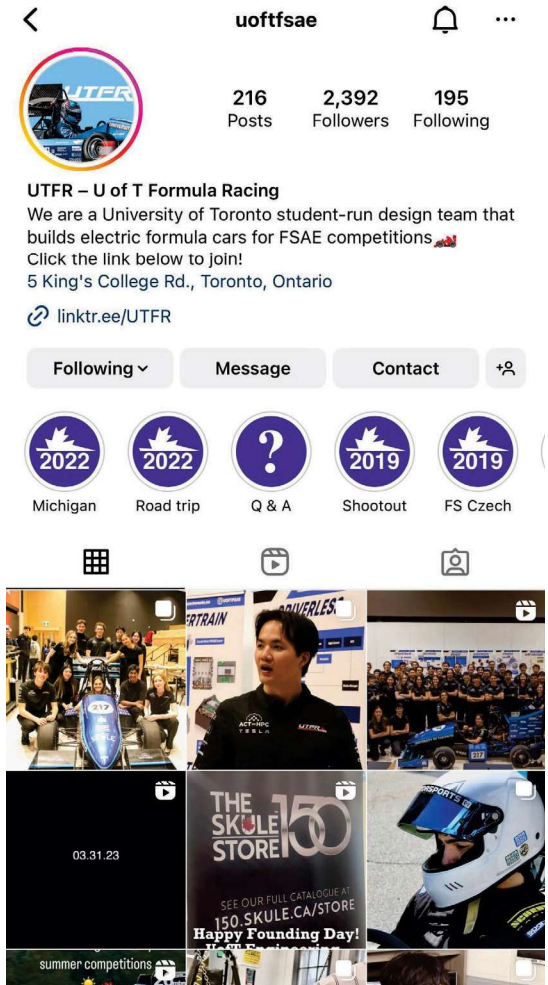

Team Apparel:

Our Sponsors' logos can be placed on our various forms of team apparel, worn regularly by our 50+ members both at competition and personally.

Team Jackets: Our Lululemon waterproof jackets are staples of the team. Members wear them regularly throughout the year around campus and at our competitions (see right).

Team Polos: Our team polos are worn during semi-formal events and during competitions, particularly presentations.

Team T-Shirts: Our T-shirts are given to every member to wear around campus as well as at competitions and events.

Sponsorship Benefits

UTFR Shootout:

Our annual UTFR Shootout hosts a day of racing for over a dozen Canadian and American universities. In addition to our entire team in attendance, our event provides the opportunity for hundreds of students, community members, and sponsors to come together, connect, and enjoy the running cars for the last time before the end of the season in autumn. There are various opportunities for brand advertising at Shootout, including:

Event advertising: This includes distributing advertisements (e.g. brochures, coupons, etc.) to all participating teams (excluding us the hosts) as part of the welcome package, including our competition handbook.

Prizes: Samples or discounts of products/services are provided to podium winning teams (excluding us the hosts) to give them a taste of what you have to offer.

Shootout T-shirts: Every team attending Shootout receives commemorative shirts for their members. In normal years, we see teams in attendance with an average of 20+ engineering students each.

Trade shows:

The team has traditionally attended several events each year, such as the Canadian International Autoshow, Motorama, and the North American International Motorcycle Supershow each year. We also appear at a number of large UofT events, such as the Alumni Reunion Alumni Festival and Orientation Week. We set up a booth with our car and sponsor board, allowing your brand to be viewed by the thousands of visitors to our booth who are interested in automotive fields.
