W H O W E A R E

The university of Toronto Formula Racing Team is a university engineering design team which competes in Formula SAE, the largest collegiate engineering design competition in the world.

Every year, UTFR fully designs and builds a new small, electric - and now driverless capable - formula-style race car to compete against other universities from around the world. With changing FSAE regulations, improving technology, and bigger goals to reach for as a team, we must not only design, build, and complete a new car, but also reimagine its success each year. New, complex challenges demand that we adapt and improve, especially with our transition from a combustion vehicle to an electric vehicle, and our entrance into the world of autonomous driving.

Over its twenty-five year history, the University of Toronto Formula Racing Team has established a reputation for ruthless competitiveness and unique design concepts. We are committed to our team's core values of achieving maximum performance in competitions, breaking boundaries in innovation and design, and most importantly, encouraging and fostering the development of our students.

F S A E / F O R M U L A S T U D E N T

W H A T I S F O R M U L A S T U D E N T ?

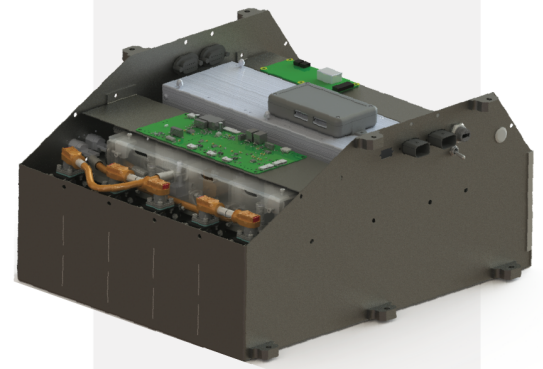

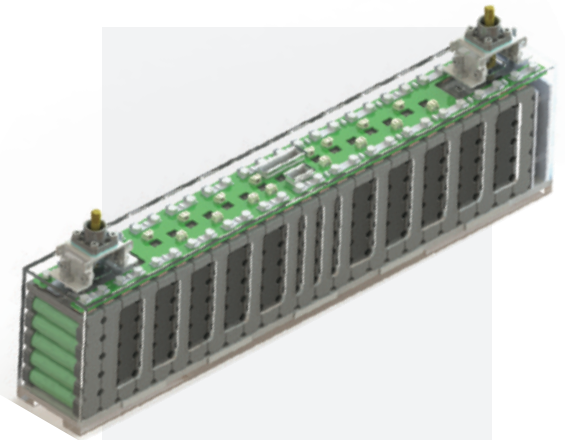

Formula SAE has over 600 universities and colleges competing worldwide. Students compete to design and build the fastest car, as evaluated by dynamic tests and an endurance race. Teams are also judged on their design rationale and business acumen by industry professionals. This unique environment fosters the talents of future industry leaders in motorsports and the automotive sector.

NEW DEVELOPMENTS

ELECTRIC VEHICLE DEVELOPMENT

It's no secret that electric vehicles are the future. After years of planning, designing, and reimagining our team, UTFR is proud to be a team which has successfully switched to producing a fully electric FSAE car. The development of our first electric vehicle has brought the team tremendous improvement in vehicle performance. In comparison to our previous projects, our new powertrain is capable of delivering over twice as much power and over seven times as much torque instantaneously, at all vehicle speeds. To tackle this challenge, our team has seen an influx of electrical and software engineering members, which has strengthened the diversity of disciplines within our team, and has allowed us to engage in another field of engineering to professional standards.

DRIVERLESS VEHICLE DEVELOPMENT

Fully driverless FSAE vehicles are in early stages of development. Staying on the cutting edge and following our partners in Europe, UT23 is our first vehicle capable of fully autonomous driving that maintains complete manual driving capabilities. Our vehicle has the ability to detect cones with multi-sensor fusion, which means it is able to successfully navigate itself through a track without any use of a remote control. The UTFR driverless program has given our team the ability to compete in competitions restricted only to those who have developed driverless abilities, and has offered our team many new avenues for members to explore. Our engineers gain experience in the full self-driving car stack, from computer vision and machine learning in perception, to path planning and control systems. We hope to usher in a new era of robotics and AI development.

PARTNER SUPPORT

WHY PARTNER WITH UTFR?

Since 1998, UTFR has enjoyed great success in both Europe and North America, all thanks to the help of our supporters. We depend on their generosity and kind contributions to accomplish our goals every year. In return, we thank them with all the publicity we can offer on our car, at our public appearances, and online. We have worked with a variety of supporters to draw attention to our partnership, and we continue to work hard to make our partnerships mutually beneficial.

UTFR has a long-standing history of partnering with and catering to the needs of companies and organizations of all types; from local small businesses that offer us the products & services we need in our manufacturing process, to globally recognized brands. We work closely with our partners to maximize the return on their investment in our future. With defined sponsorship levels featuring different benefits, our partners have clarity on exactly what we can provide them. As a student-run team, we are incredibly appreciative of the generous financial and in-kind support we receive from our sponsors to build our car and continue to work towards the future of electric and autonomous vehicles, and the futures of our members.

TEAM APPAREL PROVIDED BY

At international competitions, our team is proud to represent the University of Toronto and Canada as a whole. With this in mind, we have chosen Canada's beloved athletic company, Lululemon, to outfit our team. The logos of our sponsors can be placed on various articles of clothing which are worn by over fifty of our members at competitions and events, as well as around the UofT campus regularly.

TEAM JACKETS

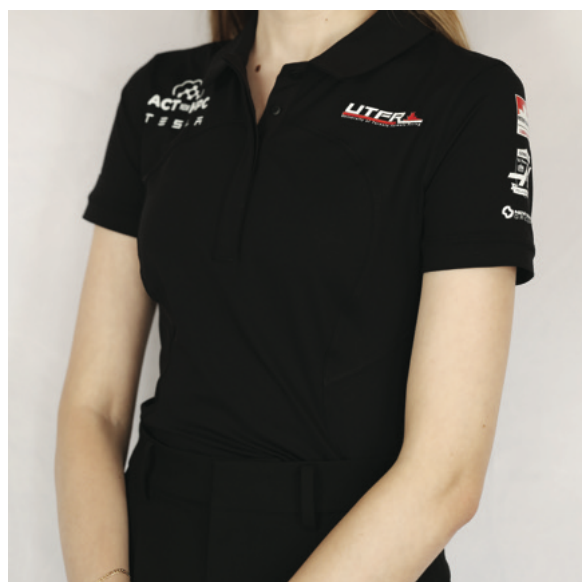

Our members may choose between three styles of water-repellent technical jackets. Sponsor logos may be placed upon each sleeve as well as the breast of the jacket. Jackets may be customized to feature the member's name, and are integrated into much of the team's everyday wardrobe.

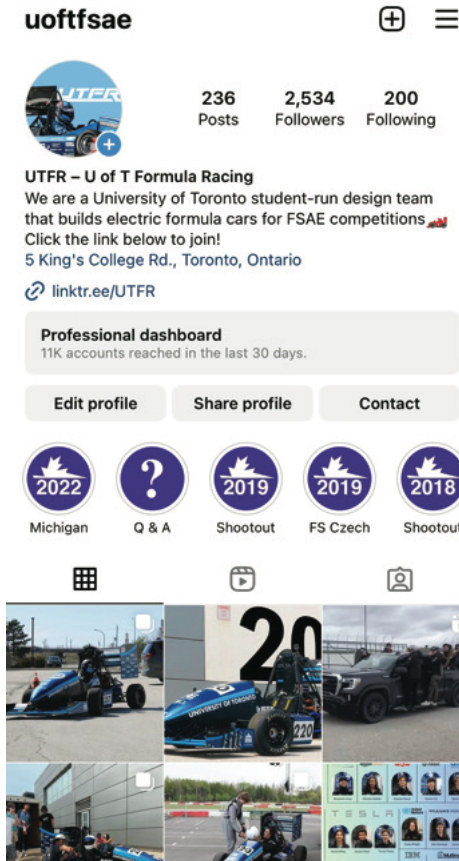

TEAM POLO SHIRTS

Members may choose between two styles of breathable, lightweight polo shirts, which maintain our team's recognizable and professional look at competitions and events. Logos are placed on the chest and both sleeves.

TEAM T-SHIRTS

Throughout the year, we offer event-related souvenir shirts which are worn by our members regularly around the campus. These shirts are not Lululemon.

I N S T A G R A M

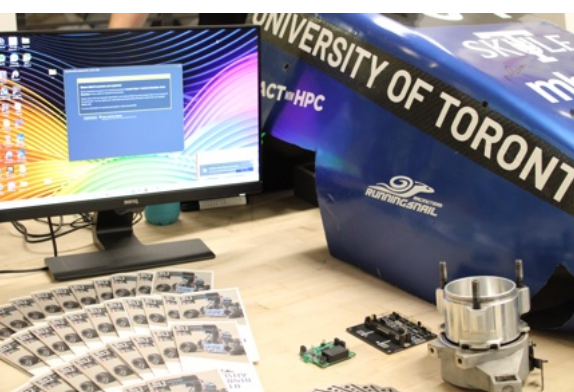

As of May 2023, our Instagram account, @uoftfsae (see left), has around 2500 followers and is rapidly growing. We maintain a consistent posting schedule of 1-2 still-image posts and one Reel (short video) per week. The account reaches on average 10 000 accounts per month. Our Instagram Reels have received a combined total of 47 000 views in 2022 so far. 93% of our audience is aged 18 - 34.

To our sponsors, we offer high-quality Instagram posts; usually consisting of photos relevant to the sponsor's product, or of the sponsor's product in use in our manufacturing process. We are also open to tailoring ad campaigns to brands' needs, utilizing Instagram features such as Reels and Stories, as well as using other social media platforms including LinkedIn and TikTok.

E V E N T S

T R A D E S H O W S + F A I R S

The team attends several events each year, such as the Canadian International Autoshow, Motorama, and the North American International Motorcycle Supershow. We also appear at a number of large UofT events, such as Alumni Reunion Festival, Skule 150, and multiple student club fairs throughout the year. We display our cars alongside our sponsorship and design boards, allowing your brand to be viewed by thousands of visitors who are interested in the automotive industry.

UTFR SHOOTOUT

Our annual UTFR Shootout hosts a day of racing for over a dozen Canadian and American universities.

In addition to our entire team in attendance, our event provides the opportunity for hundreds of students, community members, and sponsors to come together, connect, and enjoy the running cars for the last time before the end of the season in autumn. There are various opportunities for brand advertising at Shootout, including:

EVENT ADVERTISING

This includes distributing advertisements (e.g. brochures, coupons, etc.) to all participating teams (excluding us, the hosts) as part of the welcome package, including our competition handbook.

PRIZES

Samples or discounts of products/services are provided to podium winning teams (excluding us, the hosts) to give them a flavour of what you have to offer.

SHOOTOUT T-SHIRTS

Every team attending the shootout receives commemorative shirts for their members. In normal years, we generally see 20+ teams in attendance with an average of 20+ engineering students

U T F R U N V E I L I N G

In 2023 our team hosted our first ever large scale unveiling event to showcase our monumental UT₂₃ vehicle; our first electric car with driverless capabilities. Hosting an event such as this is an enriching experience for our team and allows us to exemplify our community and take pride in our work. In attendance were the families and friends of team members, faculty members who have been alongside us during our design and manufacturing process, and sponsors who have made the production of our vehicles possible. Speeches are given by each of our technical directors, and the Dean of Engineering. We extend invitations to our sponsors and encourage them to come celebrate the love of automotive with us!

F O R S P O N S O R S

At our unveiling, sponsors will have the chance to meet the full extent of our team, as well as other industry professionals, in a more social atmosphere. Food and drink will be provided, and following the presentation there will be a chatting and mingling period. Our cars will be displayed alongside our sponsorship boards, and sponsor logos are included in our unveiling presentation. Programs are provided to all guests upon arrival, and sponsors may choose to be featured on it.
